

Loïs KOUNINEF

Fullstack Web Developer

Building maintainable web applications with a systems-thinking approach.

As a former hospitality professional, I learned to coordinate services in real time, manage conflicting priorities, and adapt quickly.

Open to remote-first roles, or hybrid opportunities in Aix-en-Provence or Marseille.

🗣️ French, English (C1), German (B2)

🚗 Driving license (French B Permit)

Core Capabilities

- End-to-end development of self-hosted full-stack applications
- Containerized infrastructure (Docker)
- CI/CD automation
- Clean Code mindset

Technical Skills

Frontend:    

- Angular, Vue, Tailwind, SASS

Backend:    

- NodeJs, Golang, NestJs, Rails

Database:   

- PostgreSQL, MySQL, SQLite

DevOps & Infrastructure:    

- Docker, Docker Swarm, Traefik, Linux
- CI/CD pipelines, VPS deployment, SSL automation

Education

Applications Designer-Builder

French State Certification RNCP 36490 -
Expected Completion : December 2026

Web Developer

French State Certification RNCP 34779 -
With high honours | 2022

Soft Skills

- Attention to detail, collaborative mindset, effective communication in technical and cross-functional contexts

IT Professional Experience

Fullstack Freelance Developer | Blue-Lila | 5 months, 2026 blue-lila.com

- Integrated and extended an internal framework within a constrained architecture and limited documentation context
- Developed and maintained fullstack features in a structured application environment
- Designed reusable, stateless UI components following atomic design principles
- Integrated the frontend with backend REST APIs, ensuring consistent data exchange and state management
- Contributed to code structuring and deployment automation

Projects

🔗 **Mini-Framework Frontend** *Personal project, published and maintained*
nutin.org

- Designed a minimal frontend toolkit using TypeScript & NodeJs.
- Used in production for the framework's website and my portfolio
- Developed an SPA router and an event bus to handle navigation and application state across modules
- Set up CLI tools and a custom toolchain (build, test...)
- Modular structuring promoting reusability and separation of concerns

🔗 **Fullstack Web Application - e-ticket service** *Study project, self-hosted*
studi-exam-jo.lois-kouninef.eu

- Developed a fullstack application (NestJS, Angular, PostgreSQL) with a clear separation of concerns (UI / business logic / data)
- Implemented a complete authentication system (verification, password reset, RBAC)
- Integrated Stripe with persistent cart management and user session merging
- Designed and managed a staging-to-production deployment workflow
- Applied a production-oriented approach focused on security and reliability (sensitive data encryption, backups, controlled API access)

Previous Experience

Hospitality Professional | 20 years - until 2025

- Progressed into team management and operations leadership roles in high-pressure environments (prioritization, fast decision-making)
- Autonomous management of schedules and inventory, with an operational optimization mindset
- Contributed to business development through initiatives with a direct impact on revenue

IT Background

- Long-time Linux user (Ubuntu since 2010 and version 10.04), comfortable with system environments and command-line (CLI) workflows
- Retro-gaming emulation and system customization enthusiast
