

Loïs KOUNINEF

Fullstack Web Developer

Building maintainable, scalable, user-focused web applications.
Former hospitality professional bringing strong communication and real-world problem-solving.

Open to remote-first roles, or hybrid opportunities in Aix-en-Provence or Marseille.

💬 French, English (C1), German (B2)

🚗 Driving license (French B Permit)

Favorite Stack

- TypeScript, Angular, NestJs
- PostgreSQL
- Docker

Technical Skills

Frontend:     

- Angular, Vue, Tailwind, SASS, HTML

Backend:     

- NodeJs, Golang, Java, NestJs, Rails

Database:   

- PostgreSQL, MySQL, SQLite

DevOps & Infrastructure:    

- Docker, Docker Swarm, Traefik, Linux
- CI/CD pipelines, VPS deployment, SSL automation

Tooling & Practices:   

- Git, Bash, Jest (unit testing)

Education

Applications Designer-Builder

French State Certification RNCP 36490 -
Expected Completion : December 2026

Web Developer

French State Certification RNCP 34779 -
With high honours | 2022

Soft Skills

- Attention to detail, collaborative mindset, effective communication in technical and cross-functional contexts

IT Professional Experience

Fullstack developer | Blue-Lila | January - May 2026 blue-lila.com

- Developed fullstack features across frontend and backend layers
- Built reusable, stateless UI components following atomic design principles
- Integrated frontend applications with backend services and REST APIs
- Worked within a custom in-house framework, adapting to specific architectural constraints
- Contributed to application structure and codebase maintainability

Engineering Practices:

- Modular, reusable, and maintainable code design
- Clear separation of concerns (frontend/backend)

Projects

○ **Lightweight Frontend Toolkit - nutin** nutin.org

Stack: TypeScript, NodeJs, Handlebars, SASS

- Designed a minimal frontend toolkit with DOM-based components and explicit rendering logic
- Implemented a custom SPA router and event bus to manage navigation and application state across modules
- Built custom build and testing tools, deepening understanding of the frontend toolchain

Outcome: Strong focus on SPA architecture fundamentals and system design clarity

○ **Fullstack Web Application - e-ticket service** studi-exam-jo.lois-kouninef.eu

Stack: NestJS, Angular, PostgreSQL

- Implemented a complete authentication system (email verification, password reset) with secure authentication and authorization (RBAC)
- Integrated RESTful backend services and Stripe payments with secure checkout flow (cart persistence, user session merge)
- Implemented end-to-end transactional workflows: purchase → payment → ticket generation (QR code) → email delivery
- Designed application architecture with clear separation of concerns (UI, business logic, data layer) to support scalability and maintainability over time

Outcome: End-to-end application covering authentication, payments, and transactional systems

Previous Experience

Hospitality Professional | Various Hotels & Catering Companies | 2005 - 2025

- Coordinated teams and operations in high-pressure, real-time environments, requiring constant prioritization and rapid decision-making
- Developed strong communication, team coordination and problem-solving skills.

Transferable Skills to Software Development: Structured problem-solving, strong communication, high level of discipline and reliability under pressure.

IT Background

- Long-time Linux user (Ubuntu since 10.04), comfortable with system environments and CLI workflows
- Experience with system configuration, debugging, and developer tooling
- Retro-gaming emulation and system customization enthusiast.
